

We are a specialized manufacturer of fully certified SIP panels and home kits that meet EU regulatory requirements.

Custom-made to meet any specifications in terms of thickness and size, our focus is solely on production and delivery, ensuring precision and reliability for our clients across Europe.

Optimized for Your Business Needs.

With a clear commitment to excellence, we provide tailored solutions for construction companies and other businesses, guaranteeing expertise and compliance in every project. Our streamlined manufacturing process and efficient logistics allow us to deliver high-quality products with the best prices across Europe with precision and timeliness, making us the trusted partner for your building needs.

Material we use for manufacturing:

1. OSB EGGER/ KRONOSPAN/ SWISS KRONO
 - thickness OSB (mm) 10mm/12mm/15mm/18mm/22mm
 - size OSB (mm) 2500 x 1250mm/ 2800 x 1250mm/ 3000 x 1250mm
2. EPS Hirsh 80-150/NEOPOR Hirsh Graphite 90-150

Standard SIP panels are Available:

SIP Panel 2500x1250 (OSB 12mm). Materials: OSB - Egger, EPS 90 Graphite, EPS 100 White

The prices listed are valid as of October 2024. We kindly recommend confirming the latest prices with us, as they may be subject to updates.

NOTE:

The prices listed are valid as of October 2024. We kindly recommend confirming the latest prices with us, as they may be subject to updates.

The prices not include the estimation for transport cost. The following prices not include the VAT.

Custom Sizes and Thicknesses: SIP panels can be manufactured in any size and thickness according to the customer's technical requirements and drawings. Thanks to the fact that we purchase EPS in cubic meters and cut it to the required thicknesses at our own factory using our high-precision equipment, we can produce SIP panels of any necessary and non-standard thickness with an accuracy of up to 1 mm.

Panel Cutting and Connection Grooves: Our SIP panels can be cut to the required dimensions according to the customer's specifications. We also perform precise cutting of SIP panels according to the customer's drawings, ensuring any desired sizes. Additionally, we can create connection grooves in the core along the edges of the panels to accommodate connecting beams or other joining elements, ensuring that the customer receives panels ready for construction.

Prefabricated Wall Systems: Another service we offer is the production of prefabricated wall system from SIP panels according to the customer's drawings. We also express our readiness and willingness to manufacture prefabricated walls for modular houses or modular blocks, as requested by the customer. To proceed with this service, we kindly ask you to provide more detailed technical specifications to perform the necessary calculations.

House Kits: We also specialize in the production of complete house kits according to the customer's drawings and requirements. These kits include all the necessary SIP panels and components, precisely cut and prepared for on-site assembly. Our House Kits are designed to streamline the construction process, enabling faster and more efficient building assembly. We focus on meeting the specific needs of business partners and construction companies, ensuring that each kit is tailored for professional use in various types of projects.
